
BRIGHTKIDCO EMAIL ECOSYSTEM
AVATAR: AUTISTIC PARENT
DOC 5 OF 6 — GENERAL FALLBACK PROFILE
(Cross-Level Audience — no clear level tag)
VERSION 2.0 — END-LEVEL FOR MARKETER WORKFLOW

This doc is the MOST CRITICAL profile for REAL volume.

Audience share (pop-up self-selection): ~30-40%.
Audience share (real mail outputs incl. Cart/Browse-
Abandoners without opt-in, Post-Purchase Day 0-14): ~50%+.

Selection paths:

- Pop-up option "Still figuring out what's going on"
→ Tag: avatar_general
- Cart/Checkout/Browse Abandoners without pop-up opt-in
- Post-Purchase Day 0-14 (before Level-Detection-Mail)
- Parents who reject diagnostic labels
- Sensory-difference parents without ASD diagnosis

IMPORTANT: This is the TECHNICALLY HARDEST audience —
because it's mixed across all levels. Mails must
simultaneously work for Level 1, 2, and 3 without losing
any of them.

Goal of General-Fallback is not just conversion — but also
MIGRATION to level-specific segments where possible.

Read DOC 1 (Master Foundation) first. This doc builds on
the Cross-Level Calibration Rules from DOC 1 and deepens
them operationally.

TABLE OF CONTENTS

PART A: WHO IS THE GENERAL FALLBACK AUDIENCE
1. The 5 sub-groups

2. Demographic reality
3. Expected audience distribution
4. Why they didn't level-segment

PART B: THE CROSS-LEVEL STRATEGY

5. Symptom-First Language
6. 3-Level Psychological Pyramid
7. 4-Phase mix dynamics
8. Universal Symptom Hooks (Cross-Level)

PART C: VERBATIM LANGUAGE BANK (CROSS-LEVEL)

9. Universal Frustration Quotes
10. Universal Hope-Residue Quotes
11. Universal Self-Doubt Quotes
12. Universal Child Descriptors
13. Universal Method Descriptions
14. Universal Google Searches

PART D: TESTIMONIAL STRATEGY

15. Three-Family-Pattern
16. Single Cross-Level Testimonial
17. How specificity without level-lock-in works

PART E: TONALITY CALIBRATION

18. Medium-Balanced Tonality
19. Cross-Level Bridge Language
20. Hope vs Realism Balance

PART F: CONVERSION LEVERS FOR GENERAL FALLBACK

21. How the Big-5 levers work (Cross-Level)
22. 4 GF-specific additional levers
23. The "Universal Path" language

PART G: STRUCTURAL GUIDELINES

24. Forbidden Phrases (Cross-Level specific)
25. Sample Openers per Flow
26. Subject Line Patterns
27. Sample Closers

PART H: SEGMENT MIGRATION STRATEGY

28. Why migration is critical
29. 4 Migration Paths
30. Click-Based Migration
31. Reply-Based Migration

- 32. Purchase-Based Hints
- 33. Post-Purchase Level Detection

PART I: BUYER JOURNEY MAPPING

- 34. Cross-Level Journey Patterns
- 35. When mom self-identifies

PART J: VISUAL & DESIGN CALIBRATION

- 36. Cross-Level Visual Cues
- 37. Diverse Representation
- 38. Tone Markers in Design

PART K: SPECIAL GENERAL FALLBACK DYNAMICS

- 39. Identity Flexibility
- 40. Diagnosis-Neutral
- 41. Sub-Group Crossover
- 42. Age-Inclusivity
- 43. Progression Neutrality

PART L: CHEAT SHEET & REFERENCE

- 44. GF Mail Quick Reference
- 45. Symptomatic Bridge Language Library
- 46. Cross-References

PART A: WHO IS THE GENERAL FALLBACK AUDIENCE

1. THE 5 SUB-GROUPS

This audience consists of 5 very different sub-groups.
Mails must address all simultaneously.

SUB-GROUP A: THE DIAGNOSTIC ENTRANTS (~25% of GF)

WHO:

- No formal ASD diagnosis yet
- Waiting for evaluation or has appointments in pipeline
- Strong suspicion that autism is the case
- Pediatrician has hinted "developmental concerns"
- Other families have said: "Get that checked"

DEMOGRAPHICS:

- 28-38 years old
- Child 2-4 years old
- Often first child
- US, UK, AU mix
- Higher education over-represented (she researches actively)

MENTAL STATE:

- Confusion dominant
- "Is this autism or just delays?"
- Doesn't yet identify as "autism mom"
- Very active in research
- Hasn't decided yet which communities to join
- Very curious, very open to education

WHAT SHE READS:

- "is my 3 year old autistic"
- "speech delay potty training"
- "developmental delays toilet training"
- "early signs of autism"

IMPORTANT: She can't choose a level because she doesn't have one. But she's still primary target for BrightKidCo in Phase 1 of her journey.

EMAIL IMPLICATION:

- Education-First approach
- NO diagnosis language as prerequisite
- "If you're starting to wonder..." openers
- Soft mechanism explanation

SUB-GROUP B: THE DIAGNOSIS-REJECTERS (~15% of GF)

WHO:

- Has a child with diagnosis, but doesn't identify primarily as "autism mom"
- Consciously answered the pop-up "I'm skipping that"
- Rejects labels ("My kid is just my kid")
- But has experienced ASD-typical symptoms

DEMOGRAPHICS:

- 30-45 years old
- Child 3-8 years old
- Sometimes HSP-oriented parents or anti-diagnosis movement
- Very own language, dislikes medical terms

MENTAL STATE:

- Values self-determination over diagnosis
- Often has positive self-concept ("we're just different")
- Still wants help for potty-training
- Sensitive to "autism marketing"

WHAT SHE READS:

- "potty training my unique kid"
- "alternatives to autism diagnosis"
- "neurodivergent without diagnosis"

EMAIL IMPLICATION:

- Language WITHOUT diagnosis terms
- "For kids who process the world differently"
- Symptom language, never label

SUB-GROUP C: THE SENSORY-DIFFERENCE PARENTS (~25% of GF)

WHO:

- Child has SPD (Sensory Processing Disorder), ADHD, or other neurological differences
- NO ASD diagnosed
- OT has confirmed interoception issues
- Identifies as "neurodivergent parent"

DEMOGRAPHICS:

- 30-42 years old
- Child 3-7 years old
- Often academic background
- Knows sensory language, OT concepts
- Higher income tends to be present

MENTAL STATE:

- Sees autism marketing as "similar but not mine"
- Wants mechanism science
- Compares with ADHD/SPD-specific resources
- Makes purchase decision intellectually
- Very informed

WHAT SHE READS:

- "sensory processing disorder potty training"
- "ADHD child won't potty train"
- "interoception SPD"
- "neurodivergent kids and toileting"

IMPORTANT: This group is OFTEN overlooked, but is highly profitable — she has money, education, and mechanism understanding.

EMAIL IMPLICATION:

- Science prominent
- "For kids with sensory differences of any kind"
- Mechanism-oriented mails
- NO ASD-specific language as prerequisite

SUB-GROUP D: THE OVERWHELMED NON-SELECTORS (~25% of GF)

WHO:

- Has absolutely ASD child with clear level (1, 2, or 3)
- But didn't select the pop-up out of overwhelm
- No conscious act — more "forgot / not relevant"
- Falls into default flow
- Clicked away pop-up too fast

DEMOGRAPHICS:

- Mix of all three levels
- Often Phase 3-4 parents, tired of filling out forms
- Possibly just had a test/IEP meeting behind them

MENTAL STATE:

- Default skepticism
- Wants help without further forms
- Will read first 1-2 mails skeptically
- If relevant: can later migrate to level-specific segment

WHAT SHE READS:

- Varies by real level
- But lands on brand site often via Meta ad

EMAIL IMPLICATION:

- Mails must offer symptom hooks
- Build in migration opportunities (links to level stories)
- Acknowledge: "Wherever you are..."

SUB-GROUP E: CART/CHECKOUT/BROWSE-WITHOUT-OPT-IN (~10% of GF)

WHO:

- Has not given pop-up opt-in
- But captured via Klaviyo cookie + Cart/Checkout trigger
- Email address available via Checkout form
- No level tag

DEMOGRAPHICS:

- Varies completely (all levels possible)
- Often impulsive browsers, not researchers
- Possibly on mobile

MENTAL STATE:

- Active buying intent (Cart has indicated)
- But has abandoned
- No interest in pop-up, but in product
- Recovery via Cart mails

EMAIL IMPLICATION:

- Direct to the point
 - Symptom Recognition + Mechanism + Guarantee
 - Build migration anchor into mail
-

2. DEMOGRAPHIC REALITY

COMBINED DEMOGRAPHICS OF ALL 5 SUB-GROUPS:

AGE & FAMILY:

- Mom: 28-45 years (broad spectrum)
- Child 2-10+ years (extremely broad spectrum)
- Single moms: ~15%

GEO DISTRIBUTION:

- USA: 60%
- UK: 18%
- AU/NZ: 15%
- Canada: 7%

INCOME LEVELS:

- Middle income dominant
- Lower income: ~20%
- Upper middle: ~25%
- Variable per sub-group

EMPLOYMENT STATUS:

- Very variable
- Often working (Sub-group C highly qualified)

EDUCATION LEVEL:

- Variable
- Sub-group A + C often college-educated
- Sub-group D variable

CHILD COMORBIDITIES:

- Very variable per sub-group
- Sensory Issues frequent (~80%+)
- ASD diagnosed or suspected (~70%)
- ADHD: ~30%
- GI Issues: ~30-40%

3. EXPECTED AUDIENCE DISTRIBUTION

HOW THE 5 SUB-GROUPS DISTRIBUTE:

Sub-Group	Share of GF	Share of Total
A — Diagnostic Entrants	~25%	~10%
B — Diagnosis-Rejecters	~15%	~6%
C — Sensory-Difference Parents	~25%	~10%
D — Overwhelmed Non-Selectors	~25%	~10%
E — Cart/Browse without opt-in	~10%	~14%

→ These 5 sub-groups form ~50% of real email traffic.

DECISIVE INSIGHT:

General Fallback is NOT homogeneous. It is 5 different mom types all needing to receive the same mail set.

THEREFORE: Universal Symptom Hooks > Level Specifics.

4. WHY THEY DIDN'T LEVEL-SEGMENT

REASONS WHY POP-UP SELECTION IS MISSING:

REASON 1: NO DIAGNOSTIC LEVEL (Sub-Group A)

- She doesn't know what to choose
- "Still figuring out" is most honest answer

REASON 2: LABEL REJECTION (Sub-Group B)

- She doesn't consciously identify
- Chooses General or skips pop-up

REASON 3: NO ASD DIAGNOSIS DESPITE SYMPTOMS (Sub-Group C)

- ADHD, SPD, others — doesn't fit Level 1/2/3
- "General" or skip

REASON 4: OVERWHELM (Sub-Group D)

- Clicked pop-up away too fast
- "I'll deal with details later"

REASON 5: NOT VIA POP-UP (Sub-Group E)

- Direct cart action, no opt-in
- Klaviyo tracks her via cookie

WHAT THIS MEANS FOR MAILS:

Mails must NEVER assume:

- A diagnosis exists
- The mom knows ASD concepts
- The mom identifies as "autism mom"
- Clear level assignment

PART B: THE CROSS-LEVEL STRATEGY

5. SYMPTOM-FIRST LANGUAGE (CORE PRINCIPLE)

THE PROBLEM:

A mail must simultaneously work for:

- Mom with verbal 3-year-old (Level 1)
- Mom with non-verbal 8-year-old (Level 3)
- Mom with ADHD kid without autism
- Mom in diagnostic waiting phase

THE SOLUTION: SYMPTOM-FIRST + AGE-INCLUSIVE LANGUAGE

RULE 1: NEVER LEVEL LABELS

NEVER: "For Level 2/3 kids..."

INSTEAD: "For kids who don't feel when they need to go..."

RULE 2: NEVER FIXED AGE

NEVER: "If your 5-year-old..."

INSTEAD: "If your child is anywhere from 3 to 10+..."

RULE 3: NEVER DIAGNOSIS PREREQUISITE

NEVER: "For autistic children..."

INSTEAD: "For children whose nervous systems process signals differently..."

RULE 4: NEVER VERBAL-EXCLUSIVE

NEVER: "If he says 'I need to pee'..."

INSTEAD: "Look for signals: pulling at pants, looking down, saying 'wet,' or showing you with a gesture..."

CORE PRINCIPLE:

Avoid labels. Describe behavior patterns.

6. 3-LEVEL PSYCHOLOGICAL PYRAMID

Mails must simultaneously serve three levels:

LEVEL 1: SURFACE — UNIVERSAL RECOGNITION

"You have a child who isn't progressing in potty training like mainstream methods promise."

→ Reaches: ALL sub-groups, all levels.

LEVEL 2: MIDDLE — SPECIFIC SYMPTOMS

"Kids who don't feel when they need to / keep playing while peeing / don't notice they're wet."

→ Reaches: those with interoception issues, regardless of diagnosis.

LEVEL 3: DEEP — MECHANISM

"This isn't behavior. This is signal processing."

→ Reaches: those who want to know WHY.

EVERY MAIL must touch all 3 levels — otherwise you lose at

least one sub-group.

STRUCTURE FORMULA FOR EACH GF MAIL:

1. Opener: Universal Recognition (Level 1)
2. Body: Specific Symptoms (Level 2)
3. Why-Section: Mechanism (Level 3)
4. CTA: Universal Permission ("if this fits, here's the option")

7. 4-PHASE MIX DYNAMICS

The 4 phases from DOC 1 must all be addressable simultaneously for General Fallback. That means:

PHASE 1 ELEMENTS in each mail:

- "If you're just starting to wonder..."
- Education approach
- Gentle introduction to mechanism

PHASE 2 ELEMENTS in each mail:

- "If you tried Oh Crap or similar and it didn't work..."
- Validation of method failure
- Reframe: "wrong problem, not wrong parent"

PHASE 3 ELEMENTS in each mail:

- "If you've cycled through methods for years..."
- Science (Kelly Mahler, SPARK)
- 60-Day Guarantee as risk removal

PHASE 4 ELEMENTS in each mail:

- "Whether your kid is 3 or 10..."
- "Late is not never" hint
- Permission-not-to-buy

IMPORTANT: These 4 phase elements must be present simultaneously in each mail without making the mail feel overloaded. That's the hardest part — we must reach 4 addresses in one short message.

COMPOSITION TIPS:

Instead of 4 separate sections, integrate through:

- "Wherever you are on this journey..."
- "Whether you're 3 weeks in or 3 years in..."
- "Some parents have just started looking, others have tried everything..."

EXAMPLE OPENER TOUCHING ALL 4 PHASES:

"Whether you're just starting to wonder if something's off, or you've been trying methods for years — if your kid isn't progressing like 'every method' promises they will — here's what most parents miss. It's not behavior. It's not motivation. It's signal-timing."

8. UNIVERSAL SYMPTOM HOOKS (CROSS-LEVEL)

These symptoms are recognizable across ALL levels and sub-groups. Every parent finds at least 1-2 here:

LEVEL-AGNOSTIC SYMPTOM LIST (PRIORITY 1):

"Kids who sit on the toilet for 20 minutes and nothing happens"

→ Hits Level 1-3, all age groups.

"Kids who pee right after the pull-up comes off"

→ Hits Level 1-3, especially 3-7 years.

"Kids who play in a wet pull-up without reacting"

→ Hits especially Level 2-3, but also mild Level 1.

"Kids who refuse to even try the toilet"

→ Universal.

"Kids whose pediatrician keeps saying 'wait until they're ready' — but the readiness never arrives"

→ Universal, especially powerful.

LEVEL-AGNOSTIC SYMPTOM LIST (PRIORITY 2):

"Kids who hold their bowel movements until pull-ups go on"
"Kids who can talk about pottyng but can't do it"
"Kids who 'almost trained' multiple times"
"Kids who pee or poop seconds after leaving the toilet"
"Kids who don't seem to notice or care that they're wet"
"Kids who scream when the toilet flushes"
"Kids who need the same toilet, anywhere else triggers meltdowns"

EMAIL IMPLICATION:

In every General-Fallback mail, 3-4 symptoms from priority 1 or a combination of 1+2 should be used.

PART C: VERBATIM LANGUAGE BANK (CROSS-LEVEL)

9. UNIVERSAL FRUSTRATION QUOTES

These quotes are sub-group flexible:

"We've tried everything."

"He's almost 5 and still in pull-ups."

"I'm exhausted."

"Nothing seems to work."

"Every method ends the same way."

"I don't know what else to try."

"We're stuck."

"I'm at the end of my rope."

"This is so much harder than they said."

10. UNIVERSAL HOPE-RESIDUE QUOTES

"I just want him to be okay."

"I'm not giving up."

"There has to be something."

"Maybe we just haven't found the right thing."

"I keep hoping."

"There must be a piece we're missing."

"I have to keep trying for her."

11. UNIVERSAL SELF-DOUBT QUOTES

"Am I doing something wrong?"

"Maybe I started too early."

"Maybe I started too late."

"I feel like a failure."

"What am I missing?"

"Maybe I'm not the right mom for this."

"I should have figured this out by now."

12. UNIVERSAL CHILD DESCRIPTORS

"He's bright but..."

"She knows how but..."

"He's interested but..."

"She tries but..."

"He understands but..."

"She talks about it but..."

"He's almost there but..."

→ The "but" structure is the DNA of the General Fallback audience. The child has something — but not ALL it would need.

13. UNIVERSAL METHOD DESCRIPTIONS

"We've tried sticker charts."

"We did the bootcamp method."

"His OT recommended..."

"Her pediatrician said..."

"We bought the [book/course]..."

"Our friends suggested..."

"The teacher tried..."

"His therapist said..."

14. UNIVERSAL GOOGLE SEARCHES

"why won't my child potty train"
"potty training not working"
"kid still in diapers age [X]"
"sensory issues potty training"
"interoception kids"
"potty training kids who don't feel wet"
"how to potty train special needs"
"my child won't initiate potty"
"diaper-dependent child"
"late potty training help"

THESE QUOTES are so universal that they can be built into
EVERY General Fallback mail, regardless of level or sub-
group.

PART D: TESTIMONIAL STRATEGY

15. THREE-FAMILY-PATTERN

The hardest element. A testimonial must resonate for all
levels — how does that work?

SOLUTION: THREE-TESTIMONIAL PATTERN

Instead of ONE testimonial, offer THREE (short, compact) —
one per level — explicitly labeled:

EXAMPLE FORMAT:

"Three families. Three different situations.

— Sarah, mom of 4yo verbal son:

'He went from "almost" to "mostly" in 6 weeks.

Pre-K accepted him in underwear.'

— Lisa, mom of 6yo daughter (sensory dominant):

'After 3 years of trying everything, she finally paused when she felt wetness. That was Week 4.'

— Maria, mom of 9yo non-verbal son:

'We're 5 months in. He's not trained. But he's feeling something for the first time. That's enough for now.'

You'll see in 60 days where you fit."

WHY THIS WORKS:

- Everyone finds themselves in a testimonial
- Implicitly acknowledged: different levels exist
- No "miracle" promises
- Realistic outcomes per profile
- Creates implicit migration signal (she identifies with one)

WHEN TO USE:

- Welcome E3 (Last Day)
- Cart Recovery E2
- FAQ "Will this work for my kid"
- Browse Abandonment E2

16. SINGLE CROSS-LEVEL TESTIMONIAL

Alternative: ONE testimonial using cross-level language — works for all levels simultaneously.

EXAMPLE:

"My son is 7. We don't focus on labels in our family. He

has sensory differences, communication delays, and never showed any sign of feeling wet. We tried Oh Crap, sticker charts, scheduled sits, social stories. None worked the way they were 'supposed' to.

This isn't a 'fully trained' story. After 4 months, he sometimes initiates. He sometimes feels the signal. He still has accidents. But for the first time in 4 years, his nervous system is registering something.

I'd buy it again."

— Anonymous parent

WHY THIS WORKS:

- No diagnosis labels
- No fixed age (7 is middle for GF)
- Multiple methods mentioned (resonates broadly)
- Realistic outcome ("not fully trained, but...")
- Symptom-First Language ("sensory differences", "communication delays")

WHEN TO USE:

- Welcome E2 (central mechanism mail)
- Welcome E4 (Education)
- Cart Recovery E1
- Sunset Flow

17. SPECIFICITY WITHOUT LEVEL-LOCK-IN

IMPORTANT: Generic = not trust-building.

But: Level-specific = misses cross-level audience.

SOLUTION: SPECIFIC DETAILS, BUT LEVEL-AGNOSTIC

DO:

- ✓ "After 3 years of trying" (specific time, level-agnostic)
- ✓ "His sensory differences" (descriptive, not diagnostic)
- ✓ "He's never been verbal about bathroom needs" (verbal-inclusive)

- ✓ "Communication delays / non-verbal moments"
- ✓ Specific mini-wins (pause, look, hold the pants)

DON'T:

- ✗ "Level 2 with severe sensory" (too level-lock-in)
- ✗ "ASD Level 1 child" (misses non-ASD audience)
- ✗ "Diagnosed Level 3" (misses Sub-Group B+C)
- ✗ Specific diagnosis-code language

PART E: TONALITY CALIBRATION

18. MEDIUM-BALANCED TONALITY

Since this audience is SO mixed, the tonality must be medium-balanced. It can't be too Level-1-specific (loses Level 3), and not too Level-3-specific (loses Level 1).

HOPE LEVEL:

MEDIUM (50/50)

- Not too high (would lose Level 3)
- Not too low (would lose Level 1)
- Language like "this may help" works universally

URGENCY:

LOW-MEDIUM

- Soft urgency OK ("considering this for the year ahead")
- But never manipulative
- Not Pre-K-specific (some kids are 9)
- Not aggressive (would lose Level 3)

SCIENCE DENSITY:

MEDIUM

- Kelly Mahler yes, but not 3 paragraphs
- SPARK stat yes, but contextualized
- Interoception OK, but explained
- Mechanism specificity yes, but accessible

EMPATHY INTENSITY:

HIGH

- Across all sub-groups, mom is tired
- "I see you" universal
- Specific scenarios as recognition

TESTIMONIAL LENGTH:

MEDIUM

- 4-6 sentences per testimonial
- Multiple shorter testimonials > one long
- Cross-level variation

CALL-TO-ACTION AGGRESSIVENESS:

MEDIUM-LOW

- "See if this fits your situation"
- "Try it for 60 days, decide for yourself"
- Never hard-sell

GENERAL ENERGY:

- Inclusive, broad
- Like an experienced person who has seen many families
- Like an advisor who doesn't assume
- Patient with acknowledgment of diversity

19. CROSS-LEVEL BRIDGE LANGUAGE

These phrases are universally usable in every General-Fallback mail:

UNIVERSAL OPENERS:

- "Wherever you are on this journey..."
- "Whether you're just starting or 3 years in..."
- "If you've tried 2 things or 12 things..."
- "For kids of all ages and profiles..."
- "Whatever you call this..."

UNIVERSAL CHILD DESCRIPTORS:

- "Kids who don't feel when they need to go"
- "Kids whose nervous systems process signals differently"

- "Kids who 'should be ready' but aren't"
- "Kids whose pediatrician said 'wait'"

UNIVERSAL VALIDATION:

- "You've already worked harder than most parents ever do."
- "Whatever you've tried, you tried because you care."
- "You've already done more research than most."
- "The fact that you're here means you've been doing the work."

UNIVERSAL MECHANISM:

- "There's a signal that needs to come from the body."
- "Most methods assume the signal arrives. What if it doesn't?"
- "The brain needs sustained sensation to make the connection."
- "Pull-ups remove the signal entirely."

UNIVERSAL HOPE-RESIDUE (used carefully):

- "Some kids show signs in 2 weeks. Others 12. Both are real."
- "Wins look different for different kids. All of them count."
- "Whatever progress means for your family, we're rooting for it."

UNIVERSAL CLOSERS:

- "If this lands, you know where to find us."
- "If it doesn't, no hard feelings."
- "Whichever path you take — thanks for reading."
- "Take your time. The product will be here when you're ready."

20. HOPE VS REALISM BALANCE

THE GENERAL FALLBACK BALANCE:

50% HOPE / 50% REALISM

Hope language (sparingly per sub-group):

- "This may help close a piece of what's been missing"
- "Some families see real change. Others don't. Both happen."
- "Worth trying given everything you've already done"

Realism language (equally weighted):

- "Some kids take 2 weeks. Others 12+ weeks. Both normal."
- "Not every kid responds. 60 days to know."
- "Mini-wins look different per kid"

WHY 50/50?

Level 1 mom needs 70% hope.

Level 3 mom needs 20% hope.

Cross-Level Balance lands in the middle field at 50/50.

PART F: CONVERSION LEVERS FOR GENERAL FALLBACK

21. HOW THE BIG-5 LEVERS WORK CROSS-LEVEL

LEVER 1 ("It's not the method"): VERY HIGH

Effect Cross-Level:

- Universally applicable
- Triggers D1 + D2 for all levels
- Belief Shift works for all sub-groups
- "You haven't been failing" reframe very strong

Use:

- Welcome E2, E4
- Cart Recovery E1
- FAQ E1
- Browse Abandonment

LEVER 2 ("Pull-ups make this worse"): HIGH

Effect Cross-Level:

- Universal — all use pull-ups
- But: caution with Sub-Group C (sensory differences, no ASD) — pull-ups are less emotional
- Caution with Sub-Group E (cart abandoner) — she has no context yet

Use:

- Welcome E2 (Mechanism)
- Welcome E5 (Education)
- Cart Recovery E2

LEVER 3 ("60-Day Guarantee"): VERY HIGH

Effect Cross-Level:

- Risk-Removal critical due to audience skepticism mix
- Works universally
- Very important for Sub-Group A (Diagnostic Entrants) and Sub-Group C (Sensory-Different)

Use:

- Welcome E3 (Last Day)
- Cart Recovery E3 (Final)
- Checkout Abandonment
- FAQ mails

LEVER 4 ("Lena's two autistic sons"): HIGH (with caveat)

Effect Cross-Level:

- Peer-to-peer voice works broadly
- But: Sub-Group B (Diagnosis-Rejecters) and Sub-Group C (no ASD) might partially distance themselves
- Solution: Lena's language extend: "I'm mom of two boys who didn't follow the typical timeline"

Use:

- Lena Sign-Off in EVERY mail
- But: Mary S. Story mail (Phase 2) can use more "for all families" language

LEVER 5 ("49% SPARK Stat"): MEDIUM

Effect Cross-Level:

- Works for ASD-oriented parents

- Sub-Group C (no ASD) connects less
- Solution: Combine with "for sensory-different kids more broadly"

Language:

"49% of autistic 4-5 year olds aren't trained. For kids with sensory differences of any kind, the percentage is similar."

Use:

- Welcome E2
- FAQ E1
- Winback

22. 4 GF-SPECIFIC ADDITIONAL LEVERS

ADDITIONAL LEVER GF-A: "FOR ANY KID WHOSE SIGNAL DOESN'T COME"

Language:

"Whether your kid is verbal or non-verbal, 3 years old or 10, diagnosed or not — if their body isn't sending the signal, every method that assumes it does will fail. This works on the signal itself."

Effect:

- Classic universal language
- Addresses all 5 sub-groups directly
- Mechanism-First without prerequisite

Use:

- Welcome E2 (Mechanism)
- Cart Recovery E1
- Browse Abandonment

ADDITIONAL LEVER GF-B: "WHEREVER YOU ARE ON THIS JOURNEY"

Language:

"Some parents have just started looking. Others have tried everything. Wherever you are, here's what most parents in

similar situations have found..."

Effect:

- Phase-agnostic
- Works for Phase 1 through Phase 4
- Very inclusive

Use:

- Welcome E1 (Code Delivery)
- Welcome E4 (Education)
- Winback

ADDITIONAL LEVER GF-C: "MULTIPLE PATHS TO RECOGNITION"

Language:

"Some kids start showing awareness in 2 weeks. Some take 6 months. Some never reach 'fully trained' but reach 'mostly managed.' All of these are wins."

Effect:

- Outcome-flexible
- Realistic for all levels
- Defines success broadly

Use:

- Welcome E5 (Education)
- Cart Recovery E2
- FAQ "What should I expect?"

ADDITIONAL LEVER GF-D: "NOT JUST FOR AUTISM"

Language:

"For autistic kids. For ADHD kids. For SPD kids. For kids who just process signals differently. For neurodivergent families of any label or no label."

Effect:

- Addresses Sub-Group C directly
- Inclusive for Sub-Group B (Diagnosis-Rejecters)
- Expands the audience

Use:

- Welcome E2
- Sub-Group-C-Targeted mails (if tag known)

- FAQ "Does this work for non-autistic kids?"

23. THE "UNIVERSAL PATH" LANGUAGE

The most important rhetorical structure for General Fallback:

"WHETHER... OR... — IF..."

Pattern:

"Whether [Sub-Group A situation], or [Sub-Group C situation] — if [common symptom], here's what most parents miss."

EXAMPLES:

"Whether you're 3 weeks into wondering, or 3 years into trying — if your kid isn't progressing like 'every method' promises they will — here's what most parents miss."

"Whether your kid is verbal or not, 3 or 10, diagnosed or watching — if the signal isn't arriving, behavior-training alone won't bridge the gap."

"Whether you've tried 2 things or 12 — if your kid has 'almost trained' more than once, there's a piece worth considering."

IMPORTANT:

This "Whether...Or...If..." structure is the DNA of cross-level language. It embraces diversity without losing specificity.

PART G: STRUCTURAL GUIDELINES

24. FORBIDDEN PHRASES — CROSS-LEVEL SPECIFIC

In addition to DOC 1 Forbidden Phrases:

- ✗ "For Level 1/2/3 kids..."
→ Only hits Sub-Group D, misses others
- ✗ "Diagnosed autism only"
→ Misses Sub-Groups A and C
- ✗ "Verbal kids will..."
→ Misses Level 3
- ✗ "Your toddler will..."
→ Some kids are 8-10
- ✗ School-specific urgency (Pre-K)
→ Some kids are in special education, others still pre-K-required
- ✗ Aggressive math reframes
→ Universally off-putting
- ✗ "Just like other kids"
→ Misses all neurodivergent families
- ✗ Strictly behavioral language
→ Misses neurologically-focused parents
- ✗ "Get him trained!"
→ Never pressure
- ✗ Heavy resignation language
→ Misses Level 1 and Sub-Group A
- ✗ "Easy" / "Quick" / "Simple"
→ Universal block
- ✗ "Cure" / "Fix" / "Solve"
→ Misses all neurodivergent families

✗ "He'll be normal"
→ Misses Sub-Group B+C+others

✗ "When she's potty trained..."
→ Implies success is guaranteed. Misses Level 3.

25. SAMPLE OPENERS PER FLOW (GENERAL FALLBACK)

WELCOME E1 (Day 0 — Code Delivery):

Option A (Universal Recognition):

"Whether you're 3 weeks into wondering, or 3 years into trying — your code's below. The more useful thing in this email might be the explanation for why nothing's worked yet."

Option B (Sub-Group A - Diagnostic Entrants):

"You're not sure what's going on yet. That's okay. Your code is below — and so is a framework for when you're ready to explore."

Option C (Universal):

"Your code's below. Wherever you are on this journey — brand new or 3 years in — the rest of this email is for when you're ready to look closer."

WELCOME E2 (Day 1 — Mechanism):

"Wherever you are — just starting or years in — if your kid isn't progressing like 'every method' promises they will, here's what most parents miss. It's not behavior. It's not motivation. It's signal-timing. Specifically, something called interoception."

WELCOME E3 (Day 3 — Last Day):

"Today's the last day for the code. If you're still deciding, here are three things to consider — including the question most parents ask: 'Will this work for my kid

specifically?"

WELCOME E4 (Day 7 — Education):

"You didn't fail at potty training. Whether you tried Oh Crap, sticker charts, scheduled sits, ABA protocols, or something else — every standard method assumes a signal exists in the body. For some kids, it doesn't yet. Here's exactly what."

WELCOME E5 (Day 10 — Mechanism Deep Dive):

"Pull-ups remove the wetness signal. That's the mechanism nobody addresses, regardless of your child's age or profile. Here's what we built instead — designed for nervous systems that need MORE signal, not less."

CART ABANDONMENT E1 (Hour 1):

"You looked at the bundle yesterday. I'm guessing your kid has one of these signs: doesn't feel wet, doesn't initiate, sits on the toilet for 20 minutes with nothing happening, or 'almost trained' multiple times. Here's why one piece is often the missing one."

CART ABANDONMENT E2 (Day 1):

"Wherever you are on this journey — whether you've tried 2 things or 12 — the 60-day guarantee covers you. Either your kid responds within 60 days, or full refund. No pressure either way."

BROWSE ABANDONMENT E1 (Day 1):

"You read about the body-signal layer yesterday. The piece most parents come back to re-read is the part about how the signal-gap works the same way regardless of your child's profile. It's not about a label — it's about a missing sensation."

POST-PURCHASE LEVEL-DETECTION (Day 14):

"You've had the underwear for about a week. To send the right kind of support, can I ask one quick question about

your kid?"

WINBACK:

"It's been a while. Wherever you are now — still in pull-ups, on a new method, or taking a break — I wanted to share one new piece. Maybe it lands, maybe it doesn't."

POST-PURCHASE EARLY (Day 0-7):

"Your underwear is on the way. Whatever your child's profile — verbal or not, 3 or 10, diagnosed or watching — the first week often looks like nothing's happening. Here's what to actually look for."

26. SUBJECT LINE PATTERNS FOR GENERAL FALLBACK

WELCOME FLOW SUBJECTS:

E1:

- "Wherever you are on this journey"
- "Your code + the missing piece"
- "When 'every method' isn't working"

E2:

- "It's not behavior. It's signal-timing."
- "Why nothing's worked (it's not you)"
- "The piece nobody mentions"

E3:

- "Last day for the code"
- "Three families, three stories"
- "The 'will this work for my kid' question"

E4:

- "You didn't fail at potty training"
- "What every method assumes"
- "The signal-gap explained"

E5:

- "Pull-ups vs body-signal: the difference"
- "For nervous systems that need MORE signal"
- "What we built"

CART ABANDONMENT SUBJECTS:

E1:

- "Your cart's still here"
- "One piece, three different kids"
- "Quick question before you decide"

E2:

- "60 days to know"
- "Whether you've tried 2 things or 12"
- "What 'wins' actually look like"

E3:

- "Last reminder — your cart"
- "60-day guarantee covers you"
- "No pressure either way"

BROWSE ABANDONMENT SUBJECTS:

E1:

- "You read about the body-signal layer"
- "The part most parents re-read"
- "Why this works regardless of profile"

POST-PURCHASE SUBJECTS:

Day 0 (Order Confirmation):

- "Your order is in"
- "What to expect in the next 10 days"

Day 14 (Level-Detection):

- "Quick question about your kid"
- "To send the right support, can I ask..."
- "Help me help you — 30 seconds"

SUBJECT LINE NO-GOS FOR GENERAL FALLBACK:

- ✗ Diagnosis-specific language ("For autistic kids only")
- ✗ Age-specific hooks ("Your 4-year-old will...")
- ✗ "Last chance" (too pressure for Sub-Group A)

- ✗ "Pre-K is coming!" (misses Sub-Group C+E)
- ✗ "Miracle" / "Cure" (universal block)
- ✗ "Train in 30 days!" (overpromise)

27. SAMPLE CLOSERS

PERMISSION-NOT-TO-BUY CLOSERS:

"If this fits your situation, you know where to find us. If not — no hard feelings."

"Whichever path you take, thanks for reading this far."

"Take your time. The product will be here when you're ready."

"If today isn't right, that's a real answer. The bundle won't disappear."

"60-day guarantee. Try it, decide, no pressure."

LENA SIGN-OFF VARIANTS FOR GF:

SHORT:

"Lena —
Customer Support · Mom of two kids who took different paths"

MEDIUM:

"I have two sons who didn't follow the typical timeline. One's still in the middle of his journey. The other took us until almost 8.

Wherever you are — that's normal here.

Lena —"

LONG:

"Whatever you decide — thanks for reading this far.

If this isn't the day, that's okay. The product will be

here next month. So will I.

I have two sons who took different paths. I know what it's like to wonder if anything will help. I also know what it's like to find one piece that does. Trust your read.

Lena —"

PART H: SEGMENT MIGRATION STRATEGY

28. WHY MIGRATION IS CRITICAL

IMPORTANT: General Fallback is not an end state. It is a TEMPORARY state until mom self-identifies.

GOAL: Migration to level-specific segments where possible.

WHY MIGRATION IS IMPORTANT:

1. Level-specific mails convert better
2. Customer Lifetime Value higher with accurate segmentation
3. Post-purchase education can be personalized
4. Reduce refunds through accurate expectation management
5. Future marketing can be targeted

THEREFORE: General Fallback mails are not just conversion tools. They are also DATA COLLECTION tools.

29. 4 MIGRATION PATHS

PATH 1: CLICK-BASED MIGRATION

- Customer clicks on level-specific story links in General Fallback mails
- Click → automatic tag update via Klaviyo
- e.g. Click on "Sarah's story (4yo verbal son)" → tag avatar_level1

PATH 2: REPLY-BASED MIGRATION

- Customer replies to mail with details about child
- (Manually or automatically processed)
- Tag is set based on reply content

PATH 3: PURCHASE-BASED HINTS

- Size of ordered underwear gives age hint
- Bundle size gives experience hint
- Order Notes / Custom Field answers
- Klaviyo logic can tag based on Order Data

PATH 4: POST-PURCHASE LEVEL-DETECTION MAIL

- Day 14 mail asks: "How old is your kid? How would you describe them?"
- Answers tag into the right segment
- Strongest migration source

30. CLICK-BASED MIGRATION

HOW IT WORKS:

In every General Fallback mail, 3-4 migration anchors are built in:

LEVEL-1-ANCHOR:

"If you have a verbal child under 5 who 'almost trained' multiple times, here's Sarah's story → [Link to Level-1 story]"

LEVEL-2-ANCHOR:

"If your kid has sensory issues around the bathroom and you've worked with a BCBA, here's Lisa's path → [Link to Level-2 story]"

LEVEL-3-ANCHOR:

"If your child is 7+ and non-verbal, here's Maria's journey → [Link to Level-3 story]"

CROSS-LEVEL-ANCHOR:

"If you're not sure yet — here's the general framework → [Link to Cross-Level resource]"

KLAVIYO IMPLEMENTATION:

1. Each link has unique UTM parameters
2. Klaviyo tracks click events
3. Custom flow trigger: "When link clicked → update profile property avatar_level"
4. Subsequent mails routed based on new tag

ETIQUETTE:

- Migration anchors should be organically placed in mail
- Never as "click here if you're Level X" cold-tag
- Instead as story recommendation
- Mom thinks: "That's my kid!"

31. REPLY-BASED MIGRATION

HOW IT WORKS:

Customer replies to mail (reply encouragement is part of Lena voice).

ANALYSIS: Reply content gives hints about level.

LEVEL-1 INDICATORS IN REPLIES:

- "Pre-K is coming"
- "He's 3/4/5 years old"
- "Oh Crap didn't work"
- "He's verbal but..."
- "Almost trained"

LEVEL-2 INDICATORS:

- "BCBA / ABA / OT"

- "5/6/7 years old"
- "Sensory issues"
- "Prompt-dependent"
- "Withholding"
- "Years of trying"

LEVEL-3 INDICATORS:

- "Non-verbal" / "AAC"
- "8/9/10 years old"
- "Never been trained"
- "Specialty diapers"
- "Years of giving up"
- "Medicaid"

EMAIL IMPLICATION:

- Mail content should attract replies ("Hit reply if anything resonates")
- Klaviyo auto-tagging via reply-text-analysis possible but rarely implemented
- If manually processed: simple workflow

32. PURCHASE-BASED HINTS

DATA FROM SHOPIFY ORDERS:

UNDERWEAR SIZE (gives age hint):

- Size 2T-3T → likely Level 1 (3-4 years)
- Size 4T-5T → Mix (Level 1+2)
- Size XL/XXL → likely Level 3 (7+)

BUNDLE SIZE (gives experience hint):

- 1 Pair → tentative, new
- 3+3 Bundle → committed
- 5+5 Bundle → high-investment, often Level 2-3

ORDER NOTES:

- When mom leaves note with details
- Manually or parsed via form

KLAVIYO IMPLEMENTATION:

- Klaviyo Properties based on Shopify Order Data
- e.g. "last_purchase_size = XL" → trigger Level-3-Hint-Tag
- Then: subsequent mails Level-specific

IMPORTANT: Purchase Hints are uncertain. They are only "Hint", not "Confirmation". Therefore: Better Level-Detection-Mail for confirmation.

33. POST-PURCHASE LEVEL-DETECTION

THIS IS THE STRONGEST MIGRATION METHOD.

DAY 14 POST-PURCHASE MAIL:

Format:

Subject: "Quick question about your kid"

Body:

Hey [first_name],

You've had the underwear for about a week. To send the right kind of support — actually useful stuff, not generic — can I ask one quick question?

How would you describe your kid right now?

- [Button 1] Verbal, "almost trained" but inconsistent
- [Button 2] Sensory issues, tried many methods
- [Button 3] Non-verbal or high support needs
- [Button 4] I'm still figuring it out — keep it general

Each button just helps me tag you so the next mails fit your situation. Won't change anything else.

Thanks for being here.

Lena —

KLAVIYO IMPLEMENTATION:

1. 4 separate Buttons with unique UTM codes
2. Click → Klaviyo updates profile property:
 - Button 1 → avatar_level1
 - Button 2 → avatar_level2
 - Button 3 → avatar_level3
 - Button 4 → avatar_general (stays)
3. After 7 days without click: gentle reminder mail (optional)
4. After 14 days without click: stays General

CONVERSION RATE FOR DETECTION MAIL:

- Open: 65-75% (very high due to "your kid" hook)
 - Click: 35-50% (very high)
 - Result: ~40-50% Migration from General to specific Level
-
-

PART I: BUYER JOURNEY MAPPING

34. CROSS-LEVEL JOURNEY PATTERNS

AWARENESS (Pre-Subscribe):

Very variable per sub-group:

- Sub-Group A: active research
- Sub-Group C: specific sensory search
- Sub-Group D: random click, often Meta ad
- Sub-Group E: ad impulse, cart action

WELCOME E1 (Day 0):

- Opens slowly
- 30-60 seconds attention
- Searches for "this is for me" signal

- Click on code: 20-30%
- Purchase in this mail: 3-7%

WELCOME E2 (Day 1):

- Mechanism evaluation
- Sub-Group C especially engaged here
- Cross-level language tested here
- Click: 18-25%
- Purchase: 4-8%

WELCOME E3 (Day 3 — Last Day):

- Decision time
- 60-Day Guarantee + Permission critical
- Cross-level testimonials prominent here
- Purchase: 5-10%

WELCOME E4-E8 (Day 7-21):

- Continued education
- Migration anchors prominent
- Conversion 2-5% per mail

CART ABANDONMENT JOURNEY:

- Sub-Group E common
- Recovery rates slightly lower than Level 1
- E1 (1h): 55-65% Open, 10-15% Recovery
- E2 (24h): 35-45% Open, 6-10% Recovery
- E3 (72h): 25-35% Open, 4-7% Recovery

POST-PURCHASE JOURNEY:

Day 0 (Order Confirmation):

- Cross-Level confirmation
- Realistic Week-1 expectations

Day 7-10 (Shipping/Arrived):

- Anticipation
- Cross-Level upsell moment

Day 14 (Level-Detection):

- CRITICAL FOR MIGRATION
- 40-50% Click-Rate expected

Day 21+:

- If migration successful → level-specific routing

- If not → General Fallback stays

35. WHEN MOM SELF-IDENTIFIES

TIPPING POINTS FOR SELF-IDENTIFICATION:

When mail content hits, mom automatically identifies with a level. Triggers for self-identification:

TRIGGER 1: SPECIFIC SYMPTOM LIST

"Look at this list: which 3 sound like your kid?"

→ Mom reads, identifies herself

TRIGGER 2: TESTIMONIAL MATCH

Three-Family-Pattern → "That's me, in the second story"

TRIGGER 3: LANGUAGE MATCHING

When a verbatim quote exactly matches her situation

TRIGGER 4: DIAGNOSTIC PROCESS

Sub-Group A: after 2-3 mails realizes "That's ASD-typical" and chooses level

TRIGGER 5: COMMUNITY SIGNAL

She reads mail, then posts in community, then comes back with clearer self-image

PART J: VISUAL & DESIGN CALIBRATION

36. CROSS-LEVEL VISUAL CUES

DESIGN PRINCIPLES FOR GF MAILS:

PRINCIPLE 1: AGE-DIVERSE IMAGERY

- Kids in different ages shown (3, 5, 7, 9)
- Mix in headers/heroes
- Multiple kids in different scenes

PRINCIPLE 2: DIVERSE FAMILIES

- Different ethnicities
- Different family setups
- Single-Mom Visuals OK
- Multi-Generation Setups OK

PRINCIPLE 3: DIVERSE CHILD PROFILES

- Some kids with AAC devices visible
- Some kids with sensory tools
- Some kids in mainstream settings
- Some kids in special-needs contexts

PRINCIPLE 4: CALM, INCLUSIVE PALETTE

- Brand-Green dominant
- Soft warmth
- Not too child-pure
- Not too clinical
- Neither too bright nor too muted

37. DIVERSE REPRESENTATION

IMPORTANT for General Fallback: REPRESENTATION

IN HERO IMAGES:

DO:

- ✓ Mix of levels-spectrum (verbal kid + non-verbal kid in different mails)
- ✓ Different family compositions
- ✓ Different ethnicities (deliberately diverse)
- ✓ Various tools/aides
- ✓ Range of ages (3, 5, 7, 9, 10+)

DON'T:

- ✗ Default to "typical autism mom" stock
- ✗ Always white middle-class families
- ✗ Always toddlers (misses Level 3)
- ✗ Always older kids (misses Level 1)

PER MAIL: DELIBERATELY VARY

In a mail series, different family profiles should be visualized so that audience members find themselves in some.

38. TONE MARKERS IN DESIGN

GF MAIL DESIGN TONE:

INCLUSIVE WARMTH

- Brand-Green prominent
- Soft Cream backgrounds
- Multiple visual entry points
- Plenty of whitespace
- Section variety (different content blocks for different sub-groups)

NOT:

- Over-focused on one sub-group (too specific)
- Too generic (loses trust)
- Marketing polish (too slick)
- Clinically cold

VISUAL HIERARCHY:

- Universal Recognition (Hero) first
- Specific Symptoms (next section)
- Mechanism explanation (mid-mail)
- Three-Family or single testimonial
- Migration anchors (subtle)
- Universal Permission closer

PART K: SPECIAL GENERAL FALLBACK DYNAMICS

39. IDENTITY FLEXIBILITY

She often has NO fixed identity as "autism mom" or "special needs mom". Mails should:

DO:

- ✓ Address different identities
- ✓ Don't fixate on one
- ✓ Inclusive language throughout
- ✓ "Whatever you call this" acknowledgment

DON'T:

- ✗ "As an autism mom you know..." (misses)
- ✗ "You're part of the autism family"
- ✗ Forced identity labels

40. DIAGNOSIS-NEUTRAL

Some parents reject diagnosis language. Mails should:

DO:

- ✓ Symptoms yes, diagnosis no
- ✓ Nobody is forced into a category
- ✓ "Whatever you call this..." language

DON'T:

- ✗ "Your autistic child..."
- ✗ Presuppose a diagnosis
- ✗ Clinical diagnosis codes

41. SUB-GROUP CROSSOVER

She reads autism, ADHD, sensory communities simultaneously.

Mails can:

DO:

- ✓ Acknowledge multiple communities
- ✓ "Wherever you've been researching..."
- ✓ Mechanism as connecting language

DON'T:

- ✗ Only autism community language
- ✗ Presuppose community membership

42. AGE-INCLUSIVITY

Child can be 3 or 10. Mails should:

DO:

- ✓ Age ranges instead of fixed ages ("kids 3-10")
- ✓ Address "older kids" and "younger kids" both
- ✓ Stories with different age groups

DON'T:

- ✗ "Your toddler" (misses 8-year-olds)
- ✗ "Your elementary schooler" (misses 3-year-olds)
- ✗ Fixed age hooks

43. PROGRESSION NEUTRALITY

Some parents are in Phase 1, others Phase 4. Mails:

DO:

- ✓ Cannot assume "you've tried everything"
- ✓ Cannot assume "you're starting"

✓ "Wherever you are" energy continuous

DON'T:

- ✗ "After years of trying..." (misses Phase 1)
- ✗ "If you're just starting..." (misses Phase 4)
- ✗ Fixed phase assumptions

PART L: CHEAT SHEET & REFERENCE

44. GENERAL FALLBACK MAIL QUICK REFERENCE

WHEN WRITING A GENERAL FALLBACK MAIL, CHECK:

BEFORE WRITING:

- ☐ Which sub-groups should be primarily addressed?
- ☐ Did I plan the "Whether...Or...If..." structure?
- ☐ Did I plan migration anchors?
- ☐ Do I have 3 symptoms from Universal list?
- ☐ Do I have Permission-Not-To-Buy?
- ☐ Which flow + which mail position?

WHILE WRITING:

- ☐ Did I use Symptom-First language (NO Level labels)?
- ☐ Did I use age range language (3-10, not fixed)?
- ☐ Did I give verbal AND non-verbal hints?
- ☐ Did I subtly address all 4 phases?
- ☐ Did I include cross-level testimonials or Three-Family format?
- ☐ Did I balance tonality (50/50)?
- ☐ Did I build in migration opportunities?
- ☐ Lena sign-off Section 27 compliant?

AFTER WRITING:

- ☐ Forbidden phrases checked (Section 24)?
- ☐ NO Pre-K hooks?
- ☐ NO Level labels in copy?

- NO diagnosis prerequisites?
- NO "easy/quick" language?
- Mobile-first layout (cross-level reader-friendly)?
- Subject lines 3 options created?
- Preheaders 3 options created?
- Cross-Level Bridge Language used?

ONE-LINE SUMMARY OF GENERAL FALLBACK:

"An audience of diagnostic entrants, label-rejecters, sensory-different parents and just-not-self-identified — mails must address symptoms, not diagnoses, and build in migration anchors."

45. SYMPTOMATIC BRIDGE LANGUAGE LIBRARY

UNIVERSAL OPENERS (10 ready to use):

- "Wherever you are on this journey..."
- "Whether you're just starting or 3 years in..."
- "If you've tried 2 things or 12 things..."
- "For kids of all ages and profiles..."
- "Whatever you call this..."
- "Whether your kid is verbal or not, 3 or 10..."
- "Some parents have just started looking. Others have tried everything."
- "If your child isn't progressing like 'every method' promises..."
- "For nervous systems that need MORE signal, not less..."
- "Whatever you've been researching..."

UNIVERSAL CHILD DESCRIPTORS (10 ready to use):

- "Kids who don't feel when they need to go"
- "Kids whose nervous systems process signals differently"
- "Kids who 'should be ready' but aren't"
- "Kids whose pediatrician said 'wait'"
- "Kids who pee right after the pull-up comes off"
- "Kids who play in a wet pull-up without reacting"
- "Kids who sit on the toilet for 20 minutes — nothing"
- "Kids who have 'almost trained' multiple times"

- "Kids who hold their bowel movements until pull-ups go on"
- "Kids who can talk about pottyng but can't do it"

UNIVERSAL VALIDATION (8 ready to use):

- "You've already worked harder than most parents ever do."
- "Whatever you've tried, you tried because you care."
- "You've already done more research than most."
- "The fact that you're here means you've been doing the work."
- "You're not the problem. The standard approaches assume something your kid can't yet do."
- "Whatever stage you're at — keep being you about this."
- "Failed methods aren't failures. They're information."
- "Your instincts are good. You've earned the right to trust them."

UNIVERSAL MECHANISM (8 ready to use):

- "There's a signal that needs to come from the body."
- "Most methods assume the signal arrives. What if it doesn't?"
- "The brain needs sustained sensation to make the connection."
- "Pull-ups remove the signal entirely."
- "It's not behavior. It's signal-timing."
- "It's not motivation. It's a sensory gap."
- "Interoception is the body's internal signal system — and for some kids, it doesn't wire up like the textbooks say."
- "Body-Signal Learning Layer creates sustained wetness sensation — for nervous systems that need MORE signal."

UNIVERSAL HOPE-RESIDUE (6 ready to use):

- "Some kids show signs in 2 weeks. Others 12. Both are real."
- "Wins look different for different kids. All of them count."
- "Whatever progress means for your family, we're rooting for it."
- "Maybe in 6 weeks. Maybe in 6 months. Maybe not at all. 60 days to find out."
- "Mini-wins matter: pause, look down, pull at pants, say

'wet'"

- "Not every kid responds. Some do. You'll know within 60 days."

UNIVERSAL CLOSERS (8 ready to use):

- "If this lands, you know where to find us."
- "If it doesn't, no hard feelings."
- "Whichever path you take — thanks for reading."
- "Take your time. The product will be here when you're ready."
- "60-day guarantee. Try it, decide, no pressure."
- "If today isn't right, that's a real answer."
- "Whether you buy or not, you've been doing the work."
- "Trust your read. You know your kid."

46. CROSS-REFERENCES

For Cross-Level Mails:

- DOC 5 (this doc) primary
- DOC 1 for brand voice and master foundation

For Cart/Checkout/Browse Abandonment:

- DOC 5 dominant
- If level tag known: DOC 2-4 for calibration

For Welcome Flow General variant (Sub-Group A+D):

- DOC 5 primary
- Migration anchors to DOC 2-4 audiences

For Post-Purchase Day 0-14:

- DOC 5 (before Level Detection mail)

For Post-Purchase Level Detection (Day 14):

- DOC 5 for the detection mail itself
- Afterwards: DOC 2-4 depending on click

For FAQ/Objection (Phase 3):

- DOC 5 for General FAQ variant
- DOC 1 Objection Map Section

For Sub-Group C (Sensory-Difference, no ASD):

→ DOC 5 primary

→ NO ASD-specific DOC 2-4 (too narrow)

For RS-PDF consultation:

→ Autistic_Parent.pdf

→ Autistic_language_Bank.pdf

→ Autistic_MIRO_m.pdf

→ Important: also search for quotes from non-ASD families
where possible

END OF DOC 5 EN — GENERAL FALLBACK PROFILE
